
Reset of computer with offline access

Posted by mornhyland - 2008/04/07 11:02

Due to continued failing vision I've had to get rid of the mobile computer and use a laptop with a larger screen. Sadly since the experiment with the permissions didn't work out, I need to ask if you can reset which computer is the one that my account is associated with for offline usage. It would be a Mac.

Thank you for your work and at least trying with the other permissions.

Your registered offline machine has been reset. Our Permission Server will set the next computer you use as your offline machine. Please let us know if we may provide any additional assistance.

Thanks for acknowledging that 121Books.org did attempt to relax our file protection methods. Sadly, it proved unsuccessful. However, we will continue looking for technological developments that may allow us to try again.
